

WORLD FIRST

Piezo-Surgery-Tip **PIEZO-TIP** *for Implant-Cavity*

- enormous advantage over conservative surgical approach (drill)
- bone treatment without pressure
- protection of adjacent soft tissue
- reduced risk of injury to blood vessels and nerves
- suitable for all non-rotationally symmetric cavities cross sections (oval – root shape)
for example ROSI™ - Implant

boehm

- shape of the working tip corresponds implant shape
- less risk of infection
- working with internal cooling and peak runoff grooves eroded bone material
- patent pending
